DOTS
Phone Validation - International

Phone Validation – International offers unparalleled accuracy and breadth of coverage to quickly determine the validity of global phones numbers, providing coverage for 8.6 billion global phone numbers including 7.3 billion mobile phone numbers, covering over 250 countries and territories.

Phone numbers are standardized according to country-specific formats and receive a Quality Score that signals they are valid, helping improve contact rates and support compliance efforts.

Features & Benefits

Provides Line Type and More

Provides the line type of the validated phone number, with possible values of Wireless, Landline or VOIP.

Returns Phone Quality Score

A numeric quality score from 0 to 10 is returned to indicate the validity of the phone number. This score can be used to create business logic, such as determining the best way to contact a customer or prospect.

Provides Country and Location Data

Provides country and state (US only) data for original location of supplied number, improving compliance and fraud prevention efforts.

Returns Global Carrier and Porting Data

Returns carrier type, porting date and carrier information to facilitate compliance efforts.

Revised: June 2023

How It Works

Phone Validation - International verifies phone numbers from around the world by checking each phone number's structure, length, country code, carrier information, and porting data against global authoritative data sets to ensure its validity.
